

## About Us

The number 1 Single Sign-On and Access Management Solution for Healthcare.

Saves clinicians more than 15 minutes per day and eliminates password help desk calls with No Click Access™ to desktops and applications from Imprivata OneSign®.

## Our Solution

Electronic patient systems can greatly improve the availability and accuracy of critical patient information, but they can also complicate clinician workflows. This leads to clinician confusion and frustration, and more helpdesk calls. Imprivata OneSign® is a single sign-on and authentication management platform that combines user authentication, access management, password management, audit and compliance reporting in one secure and easy-to-manage application. OneSign® easily integrates with the leading patient systems and includes support for shared workstations, roaming desktops, fast user switching, a broad range of integrated strong authentication options (proximity cards, finger biometrics, ID tokens) and password policy implementation and management. OneSign® simplifies clinician workstation and application login to the tap of a badge or the swipe of a fingerprint through strong authentication. Workflows are simplified with No Click Access™ to information, maximizing clinician time with patients, while providing transparent security.

## Key Benefits

- Optimise investments through Single Sign-On to all applications
- Reduce password reset requests and helpdesk calls
- Improve compliance and reporting efficiency
- Secure remote access to patient health information
- Easy to use, easy to deploy and is readily accepted by clinicians

Northgate Managed Services and Imprivata are partnering to deliver single sign-on across Scotland. Imprivata's No-Click Access™ for health professionals across Scotland will provide enhanced security for electronic health records to support Scotland's 'Better Health, Better Care' strategy.

“I've worked in health for a long time and it's good to see a product which delivers immediate benefits and is seamlessly integrated with our existing IT systems.”

- Ronnie Monaghan, head of the e-health programme at NHS Fife
